

Delaware

NAEP proficiency level and percentile data as well as results from state assessments demonstrate the existence of substantial Excellence Gaps for African-American, Hispanic, and Free and Reduced Lunch Eligible students. White students had higher average AP scores than African-American and Hispanic students on AP tests and were more likely to make a “5” on an AP exam or take an AP exam. Delaware state assessments have fairly rigorous standards for advanced status.

According to NAEP proficiency data, the percentage of students at the advanced level increased in Math for non-FARM and white students with an increase in the Excellence Gap despite gains among FARM and African-American students in Grade 8 and Hispanic students in Grade 4. Reading Grade 4 scores were flat, but the Excellence Gap narrowed in Grade 8 on the strength of Hispanic and African-American students’ improvements and stagnation among white students.

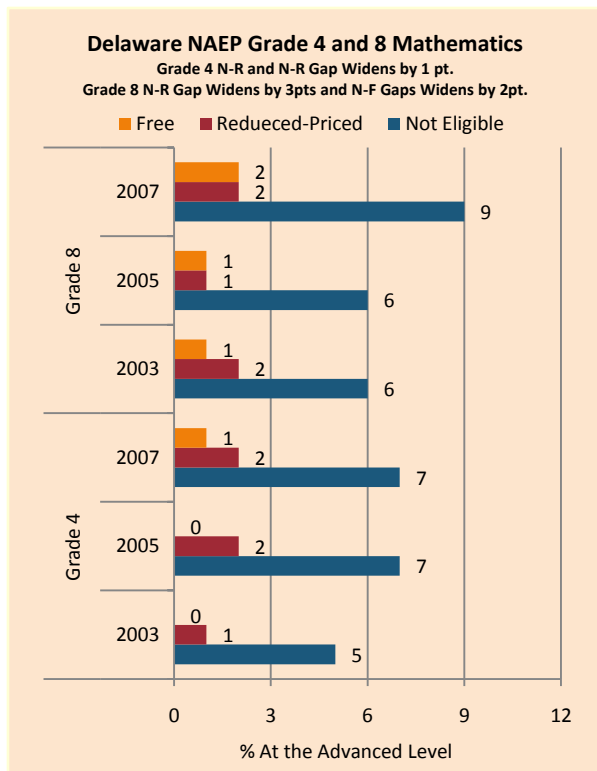

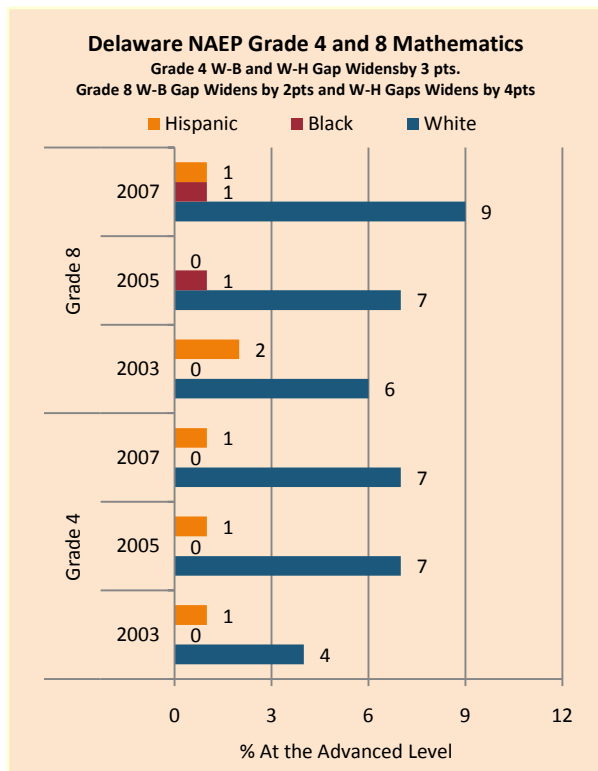

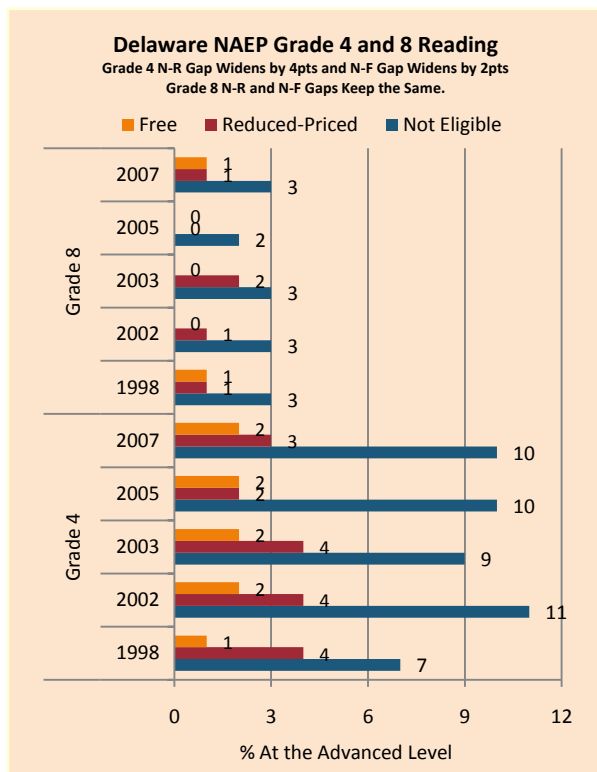

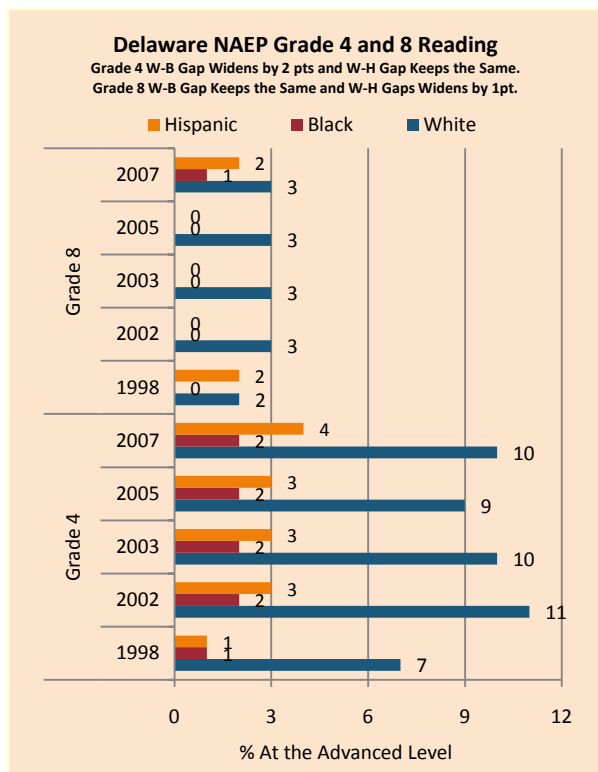

NAEP scale scores at the 90th percentile increased across subgroups in Math as well as for underperforming groups in Reading. The Excellence Gap narrowed in Reading (partly due to stability among non-FARM and white students’ scores), as well as for Hispanic students in both grades in Math and African-American students in Math Grade 4.

The proportion of students scoring at the highest level increased in Grade 4 for income and ethnic subgroups and in Grade 7 for white and more affluent students, African-American students, and low income students, with a decline in Hispanic students’ Grade 4 performances in both Math and Reading. The gap in the percentage of high achieving students widened in each instance. Student performance was essentially stable in Grade 10 Math.

On AP exams, there were modest increases in the mean scores between African-American and white students. At the same time the gap widened in the percentage of tests which received a 5 on the exam, received a 5 weighted by subgroup, and the number of tests taken weighted by enrollment.

Summary of State Policy as of 2006-2007

**Gaps in the Number of Tests Taken Weighted by Subgroup
Enrollment***

*The unit of analysis for AP data is the test, not the student. AP test results are presented as the number of scores received by members of each subgroup, NOT the number of students who received a given score on any exam. These numbers are not equivalent because some students take multiple tests.
