

Kentucky

NAEP proficiency level and percentile data as well as results from state assessments demonstrate the existence of substantial Excellence Gaps for African-American, Hispanic, and Free and Reduced Lunch Eligible students. White students had higher average AP scores than African-American students on AP tests and were more likely to make a “5” on an AP exam or take an AP exam, while Hispanic students’ performances were more competitive.

According to NAEP proficiency data, the percentage of students at the advanced level increased in Math and Reading Grade 4 for non-FARM and white students in both grades, FARM students in Math Grade 4, and African-American students in Math Grade 8, while FARM and white students’ performances declined in Reading Grade 8. The Excellence Gap expanded FARM and African-American students for all but African-American students in Reading Grade 8, where they were able to narrow the gap because of the decline in white students’ performances.

NAEP scale scores at the 90th percentile increased in Math, with African-American and Hispanic students narrowing the Excellence Gap but FARM students advancing less quickly than non-FARM students. Only non-FARM and white students improved in Reading Grade 4 (expanding achievement gaps), and only African-American students in Reading Grade 8, with declines among African-American students in Grade 4 and white and FARM students in Grade 8.

The proportion of students scoring at the advanced level on state assessments rose in Reading for ethnic and income subgroups across grade levels in Math in both elementary and middle school. The performance of white and affluent high achievers generally increased faster than African-American, Hispanic, and lower-income students on those exams. There was little change in performance or achievement gaps in high school Math.

On the AP exams, there were modest increases in the gaps between white and African-American students in mean scores and the percentage of tests taken that scored a 5 on the exam weighted by subgroup, but a decrease in the gap between white and Hispanic students in the percentage of tests taken that scored a 5 on the AP exam. The gap in the number of tests taken that scored a 5 on the exam weighted by enrollment increased for both groups.

Summary of State Policy as of 2006-2007

State	Mandate Identify	Mandate Services	Gifted Identified	Identified by Gender	Identified by Ethnicity	GT Funding	GT Funding per Identified
Kentucky	yes	yes	113,671	yes	no	\$7,100,000	\$62.46

Gaps in the Number of Tests Taken Weighted by Subgroup Enrollment*

*The unit of analysis for AP data is the test, not the student. AP test results are presented as the number of scores received by members of each subgroup, NOT the number of students who received a given score on any exam. These numbers are not equivalent because some students take multiple tests.
